This is a unique Programme addressing a very specific and special topic. The Programme's faculty includes world-renowned international experts. It is recognised globally and is supported by **the European Haematology Association**. We are very proud that the **Programme is endorsed (or supported) by International Society of Haematology**

This Programme leads to an MSc degree with specialization in Haemoglobin Disorders, mainly Thalassaemia and Sickle Cell Disease (SCD). The Programme is directed to medical professionals. However, even though usually the best candidates are Specialist Paediatricians, Specialist Haematologists and Internal Medicine Specialists, other disciplines may also greatly benefit from the Programme; e.g Blood Transfusionists and specialized nurses who have at least one university degree. .
